Abstract. Music, as an art form, has an undeniable promoting effect on the development of library economy. In this article, we first delve into the unique value of music in the development of library economy, demonstrating how music can add cultural charm to libraries, attract more readers, and promote economic prosperity. However, we are also acutely aware that music still faces many challenges and opportunities in promoting the economic development of libraries. The problems of funding shortage, talent shortage, and copyright protection urgently need to be solved, while the rapid development of technology provides unlimited possibilities for the integration of music and libraries. To this end, we have put forward a series of strategic suggestions, including strengthening the construction of music resources, carrying out rich and colorful music cultural activities, deepening the integration of music and technology, etc., aiming to fully utilize the unique charm of music and promote the sustainable development of library economy. Finally, we summarized the important significance of music in promoting the economic development of libraries, and looked forward to the broad development prospects of libraries in the field of music in the future.

Keywords: Music; Library; Economic Development Strategy.

1. Introduction

With society's rapid strides and the remarkable enhancement of people's living standards, the significance of libraries in economic development, as a pivotal aspect of cultural endeavors, is gradually surfacing. Libraries are not just repositories of knowledge, but also crucial arenas for cultural preservation and innovation. In their economic growth, music stands as an indispensable artistic element, both ubiquitous and distinct. Its profound meanings and soulful melodies resonate deeply with people's hearts. In the serene and intellectually enriching atmosphere of the library, music adds a unique allure[1,2]. It not only creates a serene and harmonious reading environment, enhancing the reading experience, but also acts as a catalyst for innovative thinking and inspiration. The melodies encourage the assimilation and transformation of knowledge, making the library a vibrant hub of intellectual exchange[3,4]. Moreover, music holds significant economic potential for libraries. Through hosting diverse events like concerts and musical lectures, libraries can attract a wider audience, increasing footfall and enhancing their reputation. These events not only enrich the cultural lives of readers but also contribute to the library's economic viability, promoting sustainable development. Therefore, exploring the role of music in boosting library economy and devising practical strategies is crucial[5,6]. This not only fosters the prosperity of library economy but also opens new avenues for innovative services and cultural dissemination. In future development, libraries should pay more attention to the role of music, actively explore the path of integration and development between music and libraries, and contribute more to building a cultural power.

2. The Value of Music in the Development of Library Economy

2.1. Enhance the Brand Image of the Library

Music, as a deeply charming art form, has its unique infectiousness and appeal fully reflected in the library. When beautiful melodies echo in the library, the harmonious rhythm seems to penetrate the soul, creating a peaceful and culturally rich space. This atmosphere not only allows readers to feel

physical and mental pleasure while reading, but also enhances the brand image of the library, making it a cultural holy land full of artistic atmosphere. The power of music lies not only in creating an atmosphere, but also in inspiring readers' inner emotions. Music with passionate melodies and bright rhythms can awaken readers' interest in reading and immerse them more deeply in the sea of books. And those gentle, soothing, and emotionally charged pieces can touch the hearts of readers and evoke deep emotional resonance. This resonance not only enhances readers' sense of identification and belonging to the library, but also makes them willing to regard the library as an important place for their cultural life, thereby further promoting the development of the library economy.

2.2. Expand the Field Of Library Services

The combination of music and libraries has brought new opportunities for the expansion of library services. By cleverly integrating music elements into various library services, not only can the content and form of services be enriched, but more readers can also be attracted to participate. The diverse forms of activities such as concerts, music lectures, and music exhibitions make libraries no longer just places for borrowing books, but a vibrant and creative cultural exchange space. These activities not only provide readers with opportunities to appreciate music and understand music culture, but also allow them to experience the unique charm of the library through participation. Meanwhile, these music activities have also brought certain economic benefits to the library. Through ticket sales, sponsorship, and other means, libraries can receive certain financial support to improve service facilities and enhance service quality. The emergence of such economic benefits further promotes the development of library economy, enabling libraries to better meet the needs of readers and achieve sustainable development of cultural undertakings. Therefore, the combination of music and library not only enriches the cultural life of readers, but also injects new vitality into the development of library economy. In the future, libraries should continue to explore the deep integration of music and services, providing readers with more diverse and high-quality cultural services.

2.3. Promote the Integrated Development of the Cultural Industry

Music, as an important pillar of the cultural industry, can be closely linked and coordinated with the development of the library economy. The integration and development of the two undoubtedly injects new vitality into the diversification and coordinated development of the cultural industry. The deep cooperation between libraries and music industry institutions is an important manifestation of this integrated development model. By jointly developing music resources and promoting music works, both parties not only achieved resource sharing, but also promoted their respective development on the basis of mutual benefit and win-win. This cooperation model not only enriches the service content of the library, enhances its brand image, but also provides a broader market and promotional platform for music industry institutions. In addition, this integrated development model also helps to promote the prosperity and development of the entire cultural industry. The integration of music and libraries has injected new creativity and vitality into the cultural industry, promoting communication and integration between different cultural fields. This kind of communication and integration not only helps to enhance the overall competitiveness of the cultural industry, but also promotes the sustainable development of the cultural industry. Therefore, strengthening the integration and development of music and libraries is not only an important way for the economic development of libraries, but also a powerful measure to promote the diversification and coordinated development of cultural industries. In the future, we look forward to seeing more deep cooperation between libraries and music industry institutions to jointly promote the prosperity and development of cultural undertakings.

3. Challenges and Opportunities Faced by Music Promoting the Economic Development of Libraries

3.1. Challenge

3.1.1. Shortage of Funds Issue

The construction of music resources, the organization and implementation of music activities, and the deep integration of music and technology all rely on financial support. However, in reality, many libraries are facing financial difficulties, which undoubtedly restricts the role of music in promoting the economic development of libraries. Lack of funds makes it difficult to collect and organize music resources, the scale and quality of music activities are difficult to improve, and the integration of music and technology is even more difficult to sustain. Therefore, solving the problem of funding shortage is the top priority for music to promote the economic development of libraries[7].

3.1.2. Copyright Protection Issues

The copyright protection of music works is undoubtedly an important cornerstone for music to promote the economic development of libraries. However, the current awareness of music copyright protection is weak, and infringement is not uncommon, which undoubtedly brings significant risks and challenges to the development of library economy through music promotion. The infringement not only damages the rights and interests of music creators, but also hinders the normal development of library music activities. Therefore, strengthening awareness of music copyright protection and cracking down on infringement is an important part of ensuring that music promotes the healthy development of library economy[8].

3.1.3. The Problem of Talent Shortage

Music promotes the economic development of libraries by integrating knowledge and skills from multiple fields such as music, library science, and cultural industries. However, the current shortage of talents with these comprehensive qualities in the market seriously restricts the development pace of libraries in this area. In order to solve this dilemma, the library needs to increase its efforts in talent introduction, while also strengthening interdisciplinary training for internal staff, striving to build a professional team that understands both music and library operations, as well as cultural industry market insights, to provide a solid talent guarantee for the sustainable development of the library economy.

3.2. Opportunities

3.2.1. Increased Policy Support

With the increasing attention of the country to cultural undertakings, the development of library economy has received unprecedented policy support. The government actively introduces various supportive policies to encourage libraries to carry out diverse music and cultural activities, aiming to promote the deep integration of music and libraries. This measure not only brings more development opportunities to the library, but also injects new vitality into its economic development. Under the guidance of policies, libraries will better play the role of cultural platforms and provide readers with more diverse and high-quality cultural services[9].

3.2.2. Market Demand Continues to Grow

With the rapid development of society, people's living standards are increasingly improving, cultural literacy is also constantly improving, and the demand for cultural life is becoming increasingly strong. Music, as a universal and beloved art form, has broad market prospects and a large audience. Therefore, libraries should actively seize this opportunity, meet the cultural needs of readers, enhance the brand influence of the library, and promote the sustainable development of the library economy by carrying out diverse music and cultural activities. This not only helps to enrich people's spiritual and cultural life, but also an important way for libraries to realize their own value[10].

3.2.3. Technological Means Constantly Innovate

The rapid development of technology has brought unprecedented opportunities to libraries. By utilizing advanced methods such as digital technology and virtual reality technology, libraries can significantly improve the construction level and service quality of music resources. These technologies not only enable digital storage and efficient retrieval of music resources, but also bring readers a more immersive music experience. This innovative service model not only meets the diverse needs of readers, but also opens up new paths for music to promote the economic development of libraries[11].

4. Strategies and Suggestions for Promoting Library Economic Development through Music

(1) Strengthening the construction of music resources is an important measure for libraries to improve service quality and meet the needs of readers. By extensively collecting and organizing various music resources, enriching the music collection of the library, and strengthening the digital processing of music resources, we can improve the efficiency and convenience of resource utilization, and provide readers with better quality music services.

(2) Libraries should strengthen the construction and management of music resources, collect, organize, classify, and digitize various types of music resources, and form a rich database of music resources. At the same time, libraries can also cooperate with music industry institutions to jointly develop music resources, achieve resource sharing and mutual benefit.

(3) Carrying out music and cultural activities in libraries is an important way to enrich the cultural life of readers and enhance the brand image of libraries. By organizing various activities such as concerts and music lectures, readers can not only appreciate music, but also gain a deeper understanding of music culture, experience the charm of music, and further promote communication and interaction between the library and readers.

(4) The library can attract more readers to participate by holding concerts, music lectures, music exhibitions, and other activities. These activities can not only enrich the cultural life of readers, but also bring certain economic benefits to the library. In addition, the library can also organize various forms of music and cultural activities during festivals, celebrations, theme events, and other occasions to enhance the brand influence and social recognition of the library.

(5) Deepening the integration of music and technology based on libraries is an important direction for promoting innovative development of libraries. By utilizing advanced technological means such as intelligent sound systems and virtual reality music experiences, we aim to create an immersive music space that allows readers to experience the charm of technology while enjoying music, achieving a perfect combination of music and technology.

(6) Libraries can actively utilize new technological means, such as digital technology, virtual reality technology, etc., to improve the construction level and service quality of music resources. For example, libraries can develop digital music service platforms to provide readers with more convenient ways to access music resources; Using virtual reality technology to create a virtual music space, providing readers with an immersive music experience, etc.

(7) Libraries should strengthen the cultivation and introduction of relevant talents, and improve the music and cultural literacy of library staff. At the same time, libraries can also cooperate with universities, research institutions, etc. to jointly cultivate talents with knowledge and skills in music, library science, cultural industry, and other fields, providing strong talent support for music to promote the economic development of libraries.

5. Conclusion and Outlook

Music, as a unique and profound art form, plays an irreplaceable role in promoting the economic development of libraries. By strengthening the construction of music resources, we can not only

enrich the cultural connotation of the library, but also attract more readers to experience and explore. At the same time, carrying out music and cultural activities not only provides readers with a platform to appreciate music, but also builds a communication bridge between the library and readers. In addition, deepening the integration of music and technology has injected new vitality into the innovative development of libraries. However, we should also be aware that music still faces many challenges and problems in promoting the economic development of libraries. The problems of funding shortage, talent shortage, and weak awareness of copyright protection urgently need to be solved. Therefore, we need the joint efforts and collaboration of the government, libraries, and various sectors of society to promote the deep integration of music and libraries, and inject new impetus into the prosperous development of the library economy.
